

Reference Evapotranspiration Report

Generated on 5/1/2025

Flaha Agri Tech - Professional Agricultural Solutions

Location: Not specified

Date of Calculation: 5/1/2025

Weather Conditions: Temperature: 20.4°C, Wind Speed: 5.7 m/s, Relative Humidity: 62%

Reference Evapotranspiration (ETo) Calculation

FAO Penman-Monteith Method

Date: 5/1/2025

Input Parameters

Mean Temperature	T	20.40 °C
Wind Speed	u_2	5.70 m/s
Relative Humidity	RH	62 %
Elevation	z	11 m
Latitude	ϕ	25.62 °
Day of Year	J	5 day
Sunshine Duration	n	8.0 hours

Radiation Parameters

Inverse Relative Distance	dr	1.03288 -
Solar Declination	δ	-0.39452 radians
Sunset Hour Angle	ω_s	1.36981 radians
Extraterrestrial Radiation	R_a	22.83 MJ m ⁻² d ⁻¹
Daylight Hours	N	10.46 hours
Solar Radiation	R_s	14.43 MJ m ⁻² d ⁻¹
Clear Sky Solar Radiation	R_{so}	17.13 MJ m ⁻² d ⁻¹

Evapotranspiration Calculation

Net Shortwave Radiation	Rns	11.11 MJ m ⁻² d ⁻¹
Net Longwave Radiation	Rnl	4.86 MJ m ⁻² d ⁻¹
Net Radiation	Rn	6.26 MJ m ⁻² d ⁻¹
Soil Heat Flux	G	0.00 MJ m ⁻² d ⁻¹
Saturation Vapor Pressure	es	2.397 kPa
Actual Vapor Pressure	ea	1.486 kPa
Slope of Vapor Pressure Curve	Δ	0.1479 kPa/°C
Psychrometric Constant	γ	0.6802 kPa/°C
Reference ET₀	ET ₀	5.22 mm/day

Final Result

Reference Evapotranspiration	ET ₀	5.22 mm/day
-------------------------------------	-----------------	--------------------

This calculation sheet is generated by Flaha Calc - ETo Calculator

Calculation based on FAO Penman-Monteith method as described in FAO Irrigation and Drainage Paper No. 56
